*All students
can reach their
full potential
if students are
present and
actively
engaged.*

- Research shows that missing 10 percent of school, or about 18 days in most school districts, negatively affects a student's academic performance. That's just two days a month and is known as chronic absence.
- The academic impact of missing school is the same whether the absences are excused or unexcused.
- When students improve their attendance rates, they improve their academic performance and chances for graduating.
