

"Not only did the MSA provide me with opportunities to deeply explore many STEM fields, but it also gave me the unique environment to learn from many brilliant peers."
- Six Yu, Harvard University

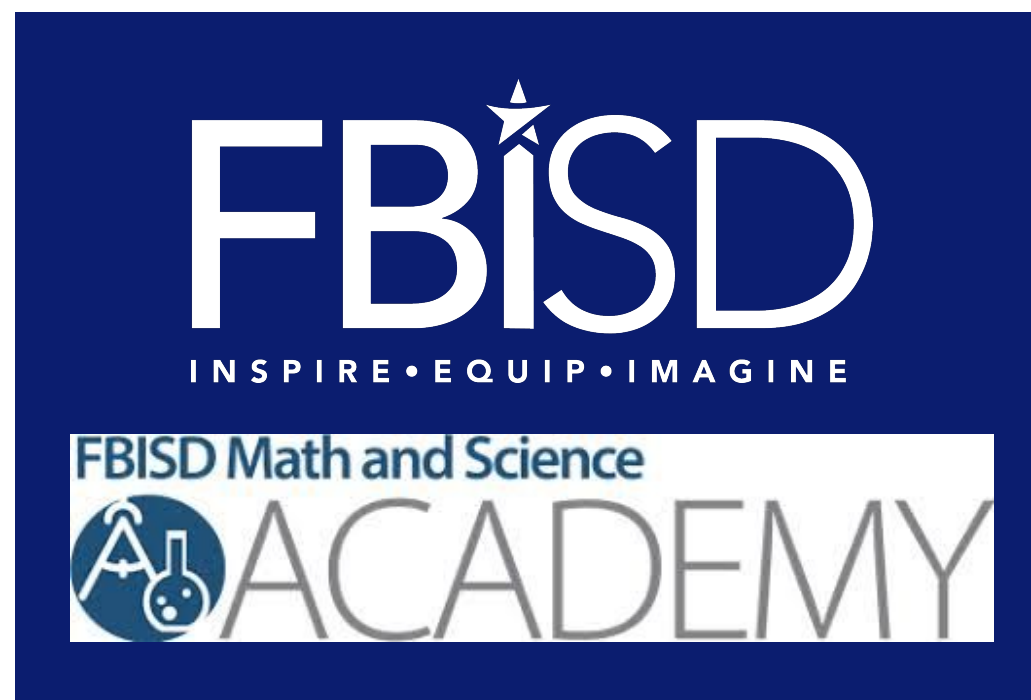

"It was opportunities like Intro to Organic Chemistry I couldn't find elsewhere and faculty like Mrs. Malone and Dr. Poche who provided education well beyond the level we needed for high school that made my college experience better. That work ethic you need, that higher level thinking and understanding, it was already there from the start all thanks to the Dulles Math and Science Academy and the Dulles Academic Decathlon Team under Coach Hartman and Coach Halfen."
- Ethan Tu
University of Texas Pharmacy School

"The opportunity for high course rigor through many AP courses at the MSA helped me have a much easier time in college, because I feel leaps and bounds more prepared in my knowledge of the subjects I'm taking. Being part of a community with so many other people with similar ambitions as my own also helped me orient my academic goals and stay motivated!"
- Pilar Ibarra
Texas A&M 2023 Terry Scholar

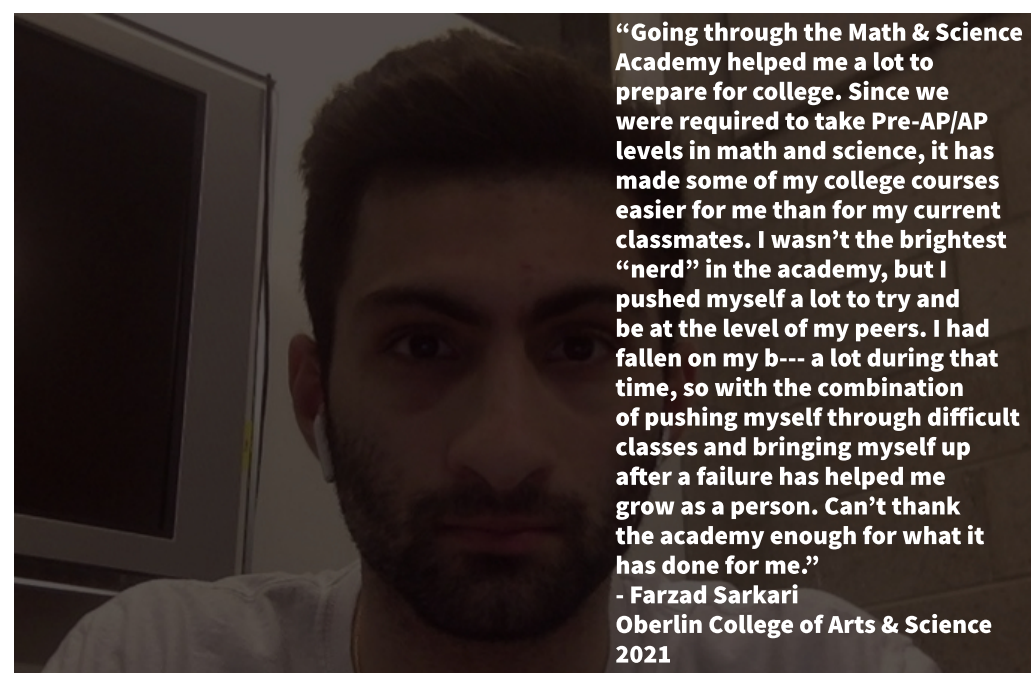

"The academy is a great place to learn good study habits and develop a good basis for skills you won't necessarily relearn in college. Additionally, participation in extracurricular competition is a worthwhile experience there compared to other schools because of the extensive support system to foster achievement. Actually!"
- Anish Patel, UT Austin 2020

"The MSA taught me how to handle many activities as once such as academics and extracurriculars. I also developed valuable skills such as time management, leadership, and friendship."
- Neehar Sawant
University of Illinois at Urbana-Champaign 2023

"Being at the MSA taught me how to work hard by offering challenging classes lead by great teachers. I don't think I would be performing well at Rice if it wasn't for the strong academic foundation the MSA helped me build."
- Jay Mehta, Rice University 2023

"Going through the Math & Science Academy helped me a lot to prepare for college. Since we were required to take Pre-AP/AP levels in math and science, it has made some of my college courses easier for me than for my current classmates. I wasn't the brightest "nerd" in the academy, but I pushed myself a lot to try and be at the level of my peers. I had fallen on my b--- a lot during that time, so with the combination of pushing myself through difficult classes and bringing myself up after a failure has helped me grow as a person. Can't thank the academy enough for what it has done for me."
- Farzad Sarkari
Oberlin College of Arts & Science 2021

"The MSA puts you a step above the rest in college by teaching you good organization and problem solving skills. Even when taking courses you've never seen before, you have the ability to tackle any problem you face"
- Olivia Jackson/ Colorado School of Mines 2023
