Pre-Calculus Scope and Sequence 2025-2026

Mathematical Process Standards: The student uses mathematical processes to acquire and demonstrate mathematical understanding. The student is expected to:

- P.1A Apply mathematics to problems arising in everyday life, society, and the workplace
- P.1B Use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution
- P.1C Select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate, and techniques, including mental math, estimation, and number sense as appropriate, to solve problems
- P.1D Communicate mathematical ideas, reasoning, and their implications using multiple representations, including symbols, diagrams, graphs, and language as appropriate
- P.1E Create and use representations to organize, record, and communicate mathematical ideas
- P.1F Analyze mathematical relationships to connect and communicate mathematical ideas
- P.1G Display, explain, and justify mathematical ideas and arguments using precise mathematical language in written or oral communication

Grading Period 1

Unit 1: Polynomial Function Analysis

Estimated Date Range: Aug. 12 – Sept. 12 (23 total school days) Instructional & Re-engagement Days in Unit: 23 days

| Concept #1: Graph and Analyze Key | Priority Standards |
| Features of Power Functions | P.2I Determine and analyze the key features of exponential, logarithmic, rational, |
| Suggested Days: 2 | polynomial, power, trigonometric, inverse trigonometric, and piecewise defined functions, including step |
| , | functions such as domain, range, symmetry, relative maximum, relative minimum, zeros, asymptotes, and |
| | intervals over which the function is increasing or decreasing |
| | Important Standards |
| | P.2N Analyze situations modeled by functions, including exponential, logarithmic, rational, polynomial, and power functions, to solve real-world problems |
| | P.2D describe symmetry of graphs of even and odd functions |
| | P.2F graph exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, and |
| | piecewise defined functions, including step functions |
| | P.2G graph functions, including exponential, logarithmic, sine, cosine, rational, polynomial, and power functions |
| | and their transformations, including $af(x)$, $f(x) + d$, $f(x - c)$, $f(bx)$ for specific values of a , b , c , and d , in mathematical and real-world problems |
| | P.2J analyze and describe end behavior of functions, including exponential, logarithmic, rational, polynomial, |
| | and power functions, using infinity notation to communicate this characteristic in mathematical and real-world |
| | problems |
| Concept #2: Graph and Analyze Key | Priority Standards |
| Features of Piecewise Functions | P.2I Determine and analyze the key features of exponential, logarithmic, rational, polynomial, power, |
| Suggested Days: 4 | trigonometric, inverse trigonometric, and piecewise defined functions, including step functions such as domain, |
| | range, symmetry, relative maximum, relative minimum, zeros, asymptotes, and intervals over which the |
| | function is increasing or decreasing |
| | |
| | Important Standards |
| | P.2F graph exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, |
| | and piecewise defined functions, including step functions |
| Concept #3: Graph and Analyze Key | Priority Standards |
| Features of Polynomial Functions | P.2I Determine and analyze the key features of exponential, logarithmic, rational, polynomial, power, |
| Suggested Days: 3 | trigonometric, inverse trigonometric, and piecewise defined functions, including step functions such as domain, |

| | range, symmetry, relative maximum, relative minimum, zeros, asymptotes, and intervals over which the function is increasing or decreasing |
|--|---|
| | Important Standards P.2N Analyze situations modeled by functions, including exponential, logarithmic, rational, polynomial, and power functions, to solve real-world problems |
| | Important Standards P.2D describe symmetry of graphs of even and odd functions P.2F graph exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, and |
| | piecewise defined functions, including step functions P.2G graph functions, including exponential, logarithmic, sine, cosine, rational, polynomial, and power functions and their transformations, including $af(x)$, $f(x) + d$, $f(x - c)$, $f(bx)$ for specific values of a , b , c , and d , in mathematical and real-world problems |
| | P.2J analyze and describe end behavior of functions, including exponential, logarithmic, rational, polynomial, and power functions, using infinity notation to communicate this characteristic in mathematical and real-world problems |
| Concept #4: Solving Polynomial Equations Suggested Days: 4 | Priority Standards P.2N Analyze situations modeled by functions, including-exponential, logarithmic, rational, polynomial, and power functions, to solve real-world problems |
| | Important Standards P.2I Determine and analyze the key features of exponential, logarithmic, rational, polynomial, power, trigonometric, inverse trigonometric, and piecewise defined functions, including step functions such as domain, range, symmetry, relative maximum, relative minimum, zeros, asymptotes, and intervals over which the function is increasing or decreasing |
| | Important Standards P.2A Use the composition of two functions to model and solve real-world problems P.2B Demonstrate that function composition is not always commutative P.2C Represent a given function as a composite function of two or more functions P.5J Solve polynomial equations with real coefficients by applying a variety of techniques in mathematical and real-world problems |
| Concept #5: Solving Polynomial Inequalities | Priority Standards |

| SAT (1 day) Mar. 4 | | N/A | N/A | | | |
| TELPAS (1 day) Testing Window Feb. 12 – Mar.27 | | | | | | |
| Concepts within the Unit | TEKS | | | | | |
| Concept #1: Geometric and Symbolic | Importar | | | | | |
| Representations | Important Standards B. All use vectors to model situations involving magnitude and direction | | | | | |
| Suggested Days: 3 | P.4I use vectors to model situations involving magnitude and direction P.4J represent the addition of vectors and the multiplication of a vector by a scalar geometrically and symbolically | | | | | |
| Juggested Days. 3 | P.4K apply vector addition and multiplication of a vector by a scalar in mathematical and real-word problems | | | | | |
| Concept #2: Vector Applications | Priority Standards | | | | | |
| Suggested Days: 7 | P.4F use trigonometry in mathematical and real-word problems, including directional bearing | | | | | |
| Juggesteu Days. / | F.4F USE | tigonometry in mathematical and real-word proble | inis, including unectional bearing | | | |

| Unit 9: | P.4G use P.4H use P.4K app | the Law of Sines in mathematical and real-world prob the Law of Cosines in mathematical and real-word prob ly vector addition and multiplication of a vector by a s rametric, and Polar Function Analysis (Continues in G Estimated Date Range: Mar. 9 – April 15 (22 total school days) Instructional & Re-engagement Days in Unit: 21 days | oblems scalar in mathematical and real-word problems |
|---|---|---|---|
| | | Assessments | |
| STATE/NATIONAL ASSESSMENTS TELPAS (1 day) Testing Window Feb. 12 – Mar.20 | | DISTRICT ASSESSMENTS N/A | COMMON FORMATIVE ASSESSMENTS (CFAs) N/A |
| Concepts within the Unit | TEKS | | |
| Concept #1: Conics Suggested Days: 5 | Important Standards P.3F determine the conic section formed when a plane intersects a double-napped cone P.3G make connections between the locus definition of conic sections and their equations in rectangular coordinates P.3H use the characteristics of an ellipse to write the equation of an ellipse with center (h, k) P.3I use the characteristics of a hyperbola to write the equation of a hyperbola with center (h, k) | | |
| Concept #2: Parametric Equations Suggested Days: 7 | Priority Standards P.3C use parametric equations to model and solve mathematical and real-world problems Important Standards P.3A graph a set of parametric equations P.3B convert parametric equations into rectangular relations and convert rectangular relations into parametric equations P.2P determine the values of the trigonometric functions at the special angles and relate them in mathematical and real-world problems P.5M use trigonometric identities such as reciprocal, quotient, Pythagorean, co-functions, even/odd, and sum and difference identities for cosine and sine to simplify trigonometric expressions | | |
| Concept #3: Polar Equations Suggested Days: 5 | Importar P.3D gra coordina | nt <u>Standards</u> ph points in the polar coordinate system and convert | between rectangular coordinates and polar |

| | and real-world problems P.5M use trigonometric identities s | gonometric functions at the special angluch as reciprocal, quotient, Pythagorean sine to simplify trigonometric expression | , co-functions, even/odd, and sum and | |

| Concepts within the Unit | | TEKS | | |
| Concept #1: Arithmetic and Geometric Sequences Suggested Days: 5 | Important Standards P.5B represent arithmetic sequence | es and geometric sequences using recurs | ive formulas | |
| Concept #2: Arithmetic Series Suggested Days: 4 | Priority Standards P.5C calculate the nth term and the problems | e nth partial sum of an arithmetic series | in mathematical and real-world | |
| | _ | netric series, when possible, written in sig d geometric series using sigma notation | zma notation | |
| Concept #3: Geometric Series Suggested Days: 4 | Priority Standards A.5E calculate the n^{th} term of a geometric series, the n^{th} partial sum of a geometric series, and sum of an infinite geometric series when it exists | | | |
| | Important Standards P.5A evaluate finite sums and geom | netric series, when possible, written in sig | gma notation | |

Department of Teaching & Learning

| | P.5D represent arithmetic series and geometric series using sigma notation |
|--|--|
| Concept #4: Binomial Theorem Suggested Days: 3 | Important Standards P.5F apply the Binomial Theorem for the expansion of $(a + b)^n$ in powers of a and b for a positive integer n , where a and b are any numbers |
