

1. A hollow tube lies flat on a table. A ball is shot through the tube. As the ball emerges from the other end, which path does it follow?

- ☐ A
- ☐ B
- ☐ C

2. A ball at the end of a string is being swung in a horizontal circle. The ball is accelerating because

- ☐ A The speed is changing.
- ☐ B The direction is changing.
- ☐ C The speed and the direction are changing.
- ☐ D The ball is not accelerating.

3. A ball at the end of a string is being swung in a horizontal circle. What is the direction of the acceleration of the ball?

- ☐ A Tangent to the circle, in the direction of the ball's motion
- ☐ B Toward the center of the circle

4. A ball at the end of a string is being swung in a horizontal circle. What is the direction of the velocity of the ball?

- ☐ A Tangent to the circle, in the direction of the ball's motion
- ☐ B Toward the center of the circle

5. A ball at the end of a string is being swung in a horizontal circle. What force is producing the centripetal acceleration of the ball?

- ☐ A Gravity
- ☐ B Air resistance
- ☐ C Normal force
- ☐ D Tension in the string

6. A ball at the end of a string is being swung in a horizontal circle. What is the direction of the net force on the ball?

- ☐ A Tangent to the circle

- (B) Toward the center of the circle
- (C) There is no net force.

7. An ice hockey puck is tied by a string to a stake in the ice. The puck is then swung in a circle. What force is producing the centripetal acceleration of the puck?

- (A) Gravity
- (B) Air resistance
- (C) Friction
- (D) Normal force
- (E) Tension in the string

8. Click the image and answer

- (A) A
- (B) B
- (C) C
- (D) D
- (E) E

QuickCheck 6.10

A physics textbook swings back and forth as a pendulum. Which is the correct free-body diagram when the book is at the bottom and moving to the right?

© 2010 Pearson Education, Inc.

Slide 6-54

9. Click the image and answer

- (A) A
- (B) B
- (C) C
- (D) D
- (E) E

QuickCheck 6.11

A car that's out of gas coasts over the top of a hill at a steady 20 m/s. Assume air resistance is negligible. Which free-body diagram describes the car at this instant?

© 2010 Pearson Education, Inc.

Slide 6-56

10. Click the image and answer

- (A) A
- (B) B
- (C) C
- (D) D
- (E) E

QuickCheck 6.12

A roller coaster car does a loop-the-loop. Which of the free-body diagrams shows the forces on the car at the top of the loop? Rolling friction can be neglected.

Slide 6-58

11. The force of Planet Y on Planet X is ___ the magnitude of $F_{X \text{ on } Y}$.

- (A) One quarter
- (B) One half
- (C) The same as
- (D) Twice

(E) Four times

12. The gravitational force between two asteroids is 1,000,000 N. What will the force be if the distance between the asteroids is doubled?

- (A) 250,000 N
- (B) 500,000 N
- (C) 1,000,000 N
- (D) 2,000,000 N
- (E) 4,000,000 N

13. Planet X has free-fall acceleration 8 m/s^2 at the surface. Planet Y has twice the mass and twice the radius of planet X. On Planet Y

- (A) $g = 2 \text{ m/s}^2$
- (B) $g = 4 \text{ m/s}^2$
- (C) $g = 8 \text{ m/s}^2$
- (D) $g = 16 \text{ m/s}^2$
- (E) $g = 32 \text{ m/s}^2$

14. Astronauts on the International Space Station are weightless because

- (A) There's no gravity in outer space.
- (B) The net force on them is zero.
- (C) The centrifugal force balances the gravitational force.
- (D) g is very small, although not zero.
- (E) They are in free fall.

15. Two satellites have circular orbits with the same radius. Which has a higher speed?

- (A) The one with more mass.
- (B) The one with less mass.
- (C) They both have the same velocity.

16. A 60-kg person stands on each of the following planets. On which planet is his or her weight the greatest?

- (A) A
- (B) B
- (C) C

17. In the formula $F = Gm_1m_2/r^2$ the quantity G :

- (A) depends on the local value of g
- (B) is used only when Earth is one of the two masses
- (C) is greatest at the surface of Earth
- (D) is a universal constant of nature
- (E) is related to the Sun in the same way that g is related to Earth

18. Earth exerts a gravitational force on the Moon, keeping it in its orbit. The reaction to this force, in the sense of Newton's third law, is:

- (A) the centripetal force on the Moon
- (B) the nearly circular orbit of the Moon
- (C) the gravitational force on Earth by the Moon
- (D) the tides due to the Moon
- (E) the apple hitting Newton on the head.

19. Three particles, two with mass m and one with mass M , might be arranged in any of the four configurations known below. Rank the configurations according to the magnitude of the gravitational force on M , least to greatest.

- (A) 1, 2, 3, 4
- (B) 2, 1, 3, 4
- (C) 2, 1, 4, 3
- (D) 2, 3, 4, 1
- (E) 2, 3, 2, 4

20. Four particles, each with mass m are arranged symmetrically about the origin on the x axis.

A fifth particle, with mass M , is on the y axis. The direction of the gravitational force on M is:

- (A) Up
- (B) Down
- (C) Left
- (D) Right
- (E) Stays in Place

21. Let F_1 be the magnitude of the gravitational force exerted on the Sun by Earth and F_2 be the magnitude of the force exerted on Earth by the Sun. Then:

- (A) F_1 is much greater than F_2
- (B) F_1 is slightly greater than F_2

- ☐ C F_1 is equal to F_2
- ☐ D F_1 is slightly less than F_2
- ☐ E F_1 is much less than F_2

22. The mass of an object:

- ☐ A is slightly different at different locations on Earth
- ☐ B is a vector
- ☐ C is independent of the acceleration due to gravity
- ☐ D is the same for all objects of the same size and shape

23. An object at the surface of Earth (at a distance R from the center of Earth) weighs 90 N. Its weight at a distance $3R$ from the center of Earth is:

- ☐ A 10 N
- ☐ B 30 N
- ☐ C 90 N
- ☐ D 270 N
- ☐ E 810 N

24. The mass of a hypothetical planet is 1/100 that of Earth and its radius is 1/4 that of Earth. If a person weighs 600N on Earth, what would he weigh on this planet?

HINT: According to $F_g = Gm_1m_2/r^2$, $F_g \propto m$ and $F_g \propto 1/r^2$.

- ☐ A 24 N
- ☐ B 48 N
- ☐ C 96 N
- ☐ D 192 N
- ☐ E 600 N

25. An object is raised from the surface of Earth to a height of two Earth radii above Earth. Then:

- ☐ A its mass increases and its weight remains constant
- ☐ B both its mass and weight remain constant
- ☐ C its mass remains constant and its weight decreases
- ☐ D both its mass and its weight decrease
- ☐ E its mass remains constant and its weight increases

26. A car is coming around a corner at a fast speed of 40 m/s. The turn has radius of curvature of 250 m. At what angle would he hope the curve be "banked." Use $g=9.8 \text{ m/s}^2$

- (A) 30°
- (B) 45°
- (C) 60°
- (D) 22.5°
- (E) 33.1°

27. A car goes through an unbanked, horizontal turn with a radius of curvature of 150 m. If the car has a coefficient of friction with the road of 0.50, what is the maximum velocity in which a car should travel on this road? Use $g=9.8\text{m/s}^2$

- (A) 0
- (B) 27.1 m/s
- (C) 9.8 m/s
- (D) 32 m/s
- (E) 22.6 m/s

28. A space station rotates to simulate "gravitational forces" with normal forces of astronauts being up against the wall. Suppose the space ship wanted the astronauts to experience a normal force value which was equivalent to their typical gravitational weight. The rotating space ship has a radius of 100 m. What would be the tangent velocity of an astronaut at the edge of this space ship? HINT: we want the centripetal acceleration to simulate the gravitational acceleration. Use $g=9.8\text{m/s}^2$

- (A) 0
- (B) 15.2 m/s
- (C) 22.3 m/s
- (D) 31.3 m/s
- (E) 44.5 m/s

29. A space station rotates to simulate "gravitational forces" with normal forces of astronauts being up against the wall. Suppose the space ship wanted the astronauts to experience a normal force value which was equivalent to their typical gravitational weight. The rotating space ship has a radius of 100 m. How long would it take the ship to make one full rotation?

- (A) 30 seconds
- (B) 20.1 seconds
- (C) 15 seconds
- (D) 44.3 seconds
- (E) 25.4 seconds

30. What is the term for the net force directed toward the center of an object's circular path?

- ☐ A circular force
- ☐ B centrifugal force
- ☐ C centripetal force
- ☐ D orbital force

31. When calculating the gravitational force between two extended bodies, you should measure the distance

- ☐ A from the closest points on each body.
- ☐ B from the most distant points on each body.
- ☐ C from the center of each body.
- ☐ D from the center of one body to the closest point on the other body.

32. A car travels in a circle with constant speed. The net force on the car

- ☐ A is zero because the car is not accelerating.
- ☐ B is directed forward, in the direction of travel.
- ☐ C is directed toward the center of the curve.
- ☐ D none of the above

33. The gravitational force between two massive spheres

- ☐ A is always an attraction.
- ☐ B depends on how massive they are.
- ☐ C depends inversely on the square of the distances between them
- ☐ D all of the above

34. A distant moon with a diameter of 1.6×10^7 has a gravitational acceleration of $g=1.2 \text{ m/s}^2$ at its surface. What is the mass of this moon?

- ☐ A $1.15 \times 10^{24} \text{ kg}$
- ☐ B $8.89 \times 10^{24} \text{ kg}$
- ☐ C $3.66 \times 10^{25} \text{ kg}$
- ☐ D $1.05 \times 10^{36} \text{ kg}$
- ☐ E $2.53 \times 10^{23} \text{ kg}$

35. How fast does the international space station travel if it is 431 km above the earth's surface? The radius of the Earth is $r_e=6371 \text{ km}$ and the mass of the earth is $m_E=5.972 \times 10^{24}$

- ☐ A 8023 m/s
- ☐ B 6088 m/s
- ☐ C 7652 m/s
- ☐ D 15 m/s

☐ E 3201 m/s

36. A bug lands on a wheel 0.2 m away from the center of rotation. If the wheel is turning at a rate of 120 rpm, what is the velocity of the bug?

☐ A 50 m/s

☐ B 13.2 m/s

☐ C 1.33 m/s

☐ D 2.5 m/s

☐ E 5.36 m/s
