Name: $\qquad$ Date: $\qquad$
Quiz name: AP Physics 2 - Test 08 - Ray Optics Pt. 1

An object is located 0.20 meters from a converging lens which has a focal length of 0.15 meters.
1.

Relative to the object, the image formed by the lens will be:
(A) virtual, inverted, smaller
(B) real, inverted, smaller.
(C) real, inverted, larger
(D) virtual, upright, larger

A beam of light passes from medium 1 to medium 2 to medium 3 as shown in the accompanying
2. figure. What is true about the respective indices of refraction $\left(n_{1}, n_{2}\right.$, and $\left.n_{3}\right)$
(A) $n_{1}>n_{2}>n_{3}$
(B) $n_{1}>n_{3}>n_{2}$
(C) $n_{2}>n_{3}>n_{1}$
(D) $n_{2}>n_{1}>n_{3}$

A laser is embedded in a material of index of refraction $n$. The laser beam emerges from the material and hits a target. See the accompanying figure for the position parameters of the laser and target.
3. The value of n is:
(A) 1.4
(B) 1.5
(C) 2.1
(D) 3.5

A beam of light is directed toward point $P$ on a boundary as shown to the right. Which segment best
4. represents the refracted ray?
(A) PA
(B) PB
(C) PC
(D) $P D$

(E) PE
$\underline{2 \text { Correct Answers: Which of the following are possible for the images formed by the lens in the }}$ 5. accompanying figure? Select two answers.
(A) Real and inverted
(B) Real and smaller in size
(C) Real and upright

D Virtual and smaller in size

A narrow beam of monochromatic light enters a lens parallel to the optic axis, as shown in the
6. accompanying diagram. Which arrow best represents the direction of the light after leaving the lens?
(A) $A$
(B) $B$
(C) C
(D) $D$

(E) $E$

Which diagram best represents what happens to a ray of light entering air from water? Air is at the
7. top in all diagrams.

A beam of light traveling in glass $\left(n_{g}=1.5\right)$ strikes a boundary with air $\left(n_{a}=1.0\right)$ at point $P$. The angle of incidence is $60^{\circ}$ as shown in the diagram. Which ray would best indicale the beam's path after
8. point P?
(A) $A$
(B) $B$
(C) C
(D) $D$

(E) $E$
$\underline{2}$ Correct Answers: A small light bulb is placed 20 cm to the right of a converging lens of focal length 10 cm .
Which of the following statements are true about the image of the bulb formed by the lens? Select
9. two answers.
(A) It is virtual
(B) It is inverted
(C) It is one-half the size of the bulb
(D) It is 20 cm to the left of the lens
10.

An image is formed on a screen by a convergent lens. If the top half of the lens is then covered what will happen to the image?
A
(B)
C
the image is dimmer but otherwise unchanged
the image becomes half as big
only the top half of the image is produced

D only the bottom half of the image is produced

The index of refraction of this lens is greater than the index of refraction of the surrounding. After
11. striking the lens shown in the diagram at right, the light ray will most likely follow which path?
(A) $A$
(B) $B$
(C) C
(D) $D$

(E) E

The index of refraction of this lens is less than the index of refraction of the surrounding. After
12. striking the lens shown in the diagram at right, the light ray will most likely follow which path?
(A) $A$
(B) $B$
(C) C
(D) $D$

(E) E

The index of refraction of this lens is equal to the index of refraction of the surrounding. After
13. striking the lens shown in the diagram at right, the light ray will most likely follow which path?
(A) $A$
(B) $B$
(C) C
(D) $D$
(E) $E$

An object is placed near a plane mirror, as shown above. Which of the labeled points is the position
14. of the image?
(A) $B$
(B) $C$
(C) D
(D) $E$

15. A diverging lens produces an image of a real object. This image is
(A) virtual, larger than the object, and upright.

B virtual, smaller than the object, and upright.
(C) virtual, smaller than the object, and inverted.
(D) real, smaller than the object, and inverted.

When you use a magnifying glass, you hold the object which you are observing closer than one focal
16. length to the lens, which is a convex lens. The image
(A)
is minified and virtual
is magnified and virtual
is minified and real
in magnified and real

Light leaves a source at X and travels to Y along the path shown above. Which of the following
17.
statements is correct?
(A) The index of refraction is the same for the two media.

Light travels faster in medium 2 than in medium 1.

Light would arrive at $Y$ in less time by taking a straight line path from $X$ to $Y$ than it does taking the path shown above.

Light leaving a source at Y and traveling to X would follow the
 same path shown above, but in reverse.

Assuming the indices of refraction of the lenses are greater than the surrounding, which three of the 18. glass lenses above would cause parallel rays of light to converge?
(A) I, II, and III
(B) I, III, and V
(C) I, IV, and V
(D) II, III, and IV

If the object distance for a converging thin lens is more than twice the focal length of the lens, the
19.
image is
(A) virtual and erect
(B) larger than the object
(C) located inside the focal point
(D) located at a distance between $f$ and $2 f$ from the lens

A physics student places an object 6.0 cm from a converging lens of focal length 9.0 cm . What is the
20. magnitude of the magnification of the image produced?
(A) 0.6
(B) 1.5
(C) 2.0
(D) 3.0

A light ray $R$ in medium I strikes a sphere of medium II with angle of incidence $\theta$, as shown above. The figure shows five possible subsequent paths for the light ray.
21. Which path is possible if medium I is air and medium II is glass?
(A) $A$
(B) $B$
(C) C
(D) $D$

(E) E

A light ray $R$ in medium I strikes a sphere of medium II with angle of incidence $\theta$, as shown above. The figure shows five possible subsequent paths for the light ray.
22. Which path is possible if medium I is glass and medium II is air?
(A) $A$
(B) $B$
(C) C
(D) $D$
(E) $E$

$\underline{2}$ Correct Answers: As shown, a beam of white light is separated into separate colors when it passes through a glass prism. Red light is refracted through a smaller angle than violet light because red
23. light has a:
(A) slower speed in glass than violet light
(B) faster speed in glass than violet light
(C) slower speed in the incident beam than violet light
(D) lower index of refraction in glass than violet light
24. When an object is placed in front of a plane mirror the image is:
(A) Upright, magnified and real

B Upright, the same size and virtual
Inverted, demagnified and real
Inverted, magnified and virtual
(E) Upright, magnified and virtual

A point object is placed in front of a plane mirror. Which is the correct location of the image
25. produced by the mirror?
(A) $A$
(B) $B$

(E) $E$

A narrow beam of light is incident on the surface of a plane mirror. The initial angle between the incident ray and reflected ray is $2 a$. If the mirror is turned around point $A$ by the angle $\theta$ what is the
26. change of the angle between two rays?

An object is placed in front of a converging lens at a distance greater than 2 F . The image produced
27. by the lens is:
(A) Real, inverted and demagnified
(B) Real, inverted and magnified

Virtual, upright and magnified
Virtual, upright and demagnified
(E) Virtual, inverted and magnified

An object is placed in front of a converging lens at a distance less than $F$. The image produced by the
28. lens is:
(A) Real, inverted and demagnified
(B) Real, inverted and magnified

Virtual, upright and magnified

(D) Virtual, upright and demagnified
(E) Virtual, inverted and magnified

A light ray is incident on a glass prism with one angle of 90 Land the other angle $\theta$. If $\theta$ is less than the critical angle for glass-air boundary, which of the following is correct for the emerging ray from
29. the opposite face of the prism?

A light ray is incident on a glass prism with one angle of 90 Band the other angle $\theta$. If $\theta$ is greater than the critical angle for glass-air boundary, which of the following is correct for the emerging ray
30. from the opposite face of the prism?

An object is placed in front of a diverging lens at a distance between $F$ and $2 F$. The image produced
31. by the lens is:
(A)
Real, inverted and demagnified

Real, inverted and magnified
(C) Virtual, upright and magnified

(D) Virtual, upright and demagnified
(E) Virtual, inverted and magnified

A group of students collected data using a lens. They varied the distance $s_{o}$ of an object from the lens and measured the image distance $s_{i}$. The figure above is their graph of the inverse of the image distance as a function of the inverse of the object distance.
32. The focal length of the lens is approximately
(A) 0.5 m
(B) 1.0 m
(C) 2.0 m

A group of students collected data using a lens. They varied the distance $s_{o}$ of an object from the lens and measured the image distance $s_{i}$. The figure above is their graph of the inverse of the image distance as a function of the inverse of the object distance.
33. What is the magnitude of the image's magnification when the object is placed 2 m from the lens?
(A) $1 / 3$
(B) 1
(C) 3
D The magnification is undefined because the image is an infinite distance from the lens.

A light ray enters a layer of water at point $X$, passes through a layer of glass, and exits through a layer of air at point $Y$, as shown in the figure. Where would the ray exit the layer of air if the glass was
34. replaced with a material of lower index of refraction? Assume no total internal reflection occurs.
(A) At a point above point $Y$
(B) At a point below point $Y$
(C) At point $Y$

D The location cannot be determined without knowing how much
lower the index of refraction of the new material is.

35. Light travels fastest
(A) in a vacuum
B through water
(C) through glass
(D) through diamond
(E) through air
36. For all transparent materials, the index of refraction
(A) is less than 1

B is greater than 1
(C) is equal to 1
(D) could be any of the given answers, it all depends on optical density
37.

A ray of light, which is traveling in air, is incident on a glass plate at a 45 degree angle. The angle of refraction in the glass.
(A) is less than 45

B is greater than 45
(C) is equal to 45
(D) could be any of the above
